

# Minitab Connect® June 24 Release

## Features in Minitab Connect June 24 Release

Connect now offers a multi-language experience with regional settings and localized Help content.

Use the application in your preferred language, enabling teams across regions to collaborate more effectively and reduce misunderstandings. Configure date formats, number styles, and measurement units to match local standards and improve data clarity. Access translated Help documentation to quickly find answers, learn features, and stay productive without language barriers.

### **Cross Filtering Bar Chart, Pareto Chart, and Pie Chart in Dashboards**

This feature introduces the ability to interact directly with Dashboard charts to filter data. By allowing a user to click data in one chart (for example, a bar, point, or region), the rest of the visuals on the dashboard will automatically update to show only the related subset of data.
