

Minitab Simul8® 33.2.2

1. New Features in Minitab Simul8

Minitab Simul8® guidance is now available from the Minitab Solution Center

Minitab Simul8® Support is now available through the Minitab Solution Center Support site. Find the same trusted guidance in a refreshed experience with improved organization, easier navigation, and clearer categorization.

2. Problems Resolved in Minitab Simul8

The following issues are resolved in Minitab Simul8.

- Object memos no longer appear incorrectly under the **On Breakdown** column in the Input Summary for activities. (31713)
- On the Conveyor graphics tab, the options to rotate, flip, and mirror conveyor graphics now apply the expected changes. (31720)
- Resource utilization results are now reported correctly when Scheduled Maintenance is used. Previously, utilization results could appear incorrectly in charts, transaction logs, or Visual Logic (33416)
- Label-based timing now works correctly when an activity uses a Log Normal distribution. Previously, the activity timing could be set to one time unit instead of using the distribution parameters. (32381)
- When importing a process map from Minitab Workspace, Simul8 now displays a message if there is an issue with the file. (30887)
- Improved the GitHub SSH connection experience by eliminating the need to use command-line controls and providing clearer, more detailed messages when connection errors occur. (36369)
